	TIME:

### Project Title: Online Time Table Generation

#### Abstract

Provide a web application which generates a free list, individual list, block list for a given Time Table.

#### Presentation:

In present day scenario, faculty member's free period identification is quite complex. By using this project, one can generate:

- **Free List:** A list which gives us details which faculty members are available for a given day,
- **Individual List:** A list which gives us details about subjects and sections allocated to a faculty member
- **Blocked List:** A block list is mainly used by the Dean and the Head of the Department. They can identify for a given hour which faculty members are having their classes

Using this application, faculty can easily generate free list skipping hours of tedious work .This can be used in any institute intending to have their free list generated with just few clicks which is very easy and efficient.
